

# BRAVO

## Cisco Catalyst Center Foundation

Partner

Premier Advisor  
Advanced Security Architecture  
Specialized

### POTENTIAL DELIVERABLES

Catalyst Center consists of multiple components that Bravo will tailor to meet your companies' specific requirements. With potential components being the following:

- Configure Catalyst Center nodes
- Configure existing Wireless LAN Controller (WLC)
- Configure existing network devices (routers/switches).
- Connect existing Cisco ISE deployment to Catalyst/DNA Center natively via PxGrid.
- Support images to the "Image Repository" and set "Golden Image"
- Onboard switches via PNP

### MINT

MINT-DNAC-BRV - This SKU can be used to transact our services in Cisco Commerce Workspace. Please reach out to sales@bravoconsulting.net for appropriate scoping

### ABOUT BRAVO

At Bravo Consulting, we believe that cybersecurity doesn't have to be complicated. Our mission is to simplify the complexities of securing and managing your network while empowering your organization to achieve unmatched cyber resilience.

As a "Services Only" partner dedicated to delivering tailored solutions. Security is the cornerstone of our offerings and remains at the heart of every solution we deliver. Our service delivery approach prioritizes customer satisfaction by empowering you with knowledge and support throughout the lifecycle of each engagement, whether through professional services or co-managed service arrangements.

### CISCO CATALYST CENTER

Cisco Catalyst Center offers value by centralizing management for Cisco Catalyst networks, streamlining operations through automation and simplifying network configuration and troubleshooting. It enhances security and network performance by providing real-time insights and the ability to enforce consistent policies across the entire network infrastructure.

### CATALYST CENTER COMPLEXITIES

Deploying Cisco Catalyst Center can be complex due to the need for deep integration with existing Cisco infrastructure, which requires careful planning and compatibility checks. Additionally, managing the automation and orchestration features can be challenging without advanced knowledge of network protocols and policies, as well as ongoing maintenance for software updates and security.

**That's where Bravo steps in. With over 600 successful Catalyst Center deployments, we are the trusted partner to ensure your Catalyst Center instance is fully optimized.**

### ENGAGEMENT OUTLINE

With our experience, we have built out proven methodologies for successful project management and delivery. We will break up the quickstart into four phases

#### Cisco Catalyst Center Quickstart

- During this phase, Bravo will work with the Customer to plan, deploy, and configure the DNA Center Solution within the Customer's Environment. This phase encompasses everything from pre-deployment design workshops to implementation execution and to eventual dedicated knowledge transfer sessions.

#### Automation & Software Image Management (SWIM)

- This phase, either standalone or included as an addition to the Catalyst Center QuickStart, is intended to provide the Customer with the functionality afforded through the use of these critical features.

#### Assurance

- During this phase, Bravo will review the existing Catalyst/DNA Center environment to plan, configure, and deploy Assurance to fit the needs of the Customer's technical team.

#### Knowledge Transfer

- Bravo's approach for services delivery follows a "teach you to fish" model, where Bravo consultants will teach the Customer engineering team during the services. This enables the Customer engineers to learn throughout the services period and be in a position to support the solution earlier and minimize requirements for a formal knowledge transfer.
