

POTENTIAL FOCUS AREAS

Cisco Secure Firewalls consists of multiple components that Bravo can demonstrate to meet your companies' specific requirements. With potential focus areas being the following:

- Segmentation of security zones inside of the firewall
- Routing between circuits
- Tunnel to datacenter from FTD to a specific Device

MINT

MINT-DNAC-BRV - This SKU can be used to transact our services in Cisco Commerce Workspace. Please reach out to sales@bravoconsulting.net for appropriate scoping

ABOUT BRAVO

At Bravo Consulting, we believe that cybersecurity doesn't have to be complicated. Our mission is to simplify the complexities of securing and managing your network while empowering your organization to achieve unmatched cyber resilience.

As a "Services Only" partner dedicated to delivering tailored solutions. Security is the cornerstone of our offerings and remains at the heart of every solution we deliver. Our service delivery approach prioritizes customer satisfaction by empowering you with knowledge and support throughout the lifecycle of each engagement, whether through professional services or co-managed service arrangements.

CISCO SECURE FIREWALL

Cisco firewalls offer robust security, with advanced threat protection and automated policy enforcement, making them a strong choice for enterprises of all sizes. As a leader in the Forrester Wave for Enterprise Firewall Solutions in Q4 2024, Cisco's integration of AI and Zero Trust capabilities has helped it remain competitive in delivering security for hybrid environments, including cloud, virtual, and physical networks.

ENGAGEMENT OVERVIEW

As a trusted Cisco security partner, we have developed proven methodologies for successful project management and delivery to ensure a successful engagement.

Bravo will host a series of workshops with your Technical Team to begin configuration of the necessary elements to support demonstration of the appropriate code for the Cisco Secure Firewall platform within the Customer's network environment to best provide the functionality and stability required for successful secure business outcomes.

Bravo will verify the configuration and version of Cisco Secure Firewall Management Console (FMC) and begin configuration of Cisco Secure Firewall Threat Defense (FTD). Firewall instances to be managed from the FMC as defined.

With the environment configured, Bravo will work with your technical team to ensure that the following items are included in the validation of success criteria categories (based on requirements defined during project):

- FMC/FTD Initial Setup
- Interface/Device Settings
- Routing
- VPN
- Access Control
- Advanced Security Features
- User Identity
- Advanced Network Analysis
