BRAVO
Cisco ISE Foundation

POTENTIAL DELIVERABLES

Cisco ISE consists of multiple components that Bravo will tailor to meet your companies' specific requirements. With potential components being the following:

- ISE Deployment
- ISE Upgrade
- Load Balancer Guidance/Config
- Directory/Identity Integration
- Certificate Authority
- Supplicant Configuration (Wired and/or Wireless)
- Profiling
- Posture/Compliance
- Access Control Enforcement
- Location(s) for Deployment

MINT

MINT-DNAC-BRV - This SKU can be used to transact our services in Cisco Commerce Workspace. Please reach out to sales@bravoconsulting.net for appropriate scoping

ABOUT BRAVO

At Bravo Consulting, we believe that cybersecurity doesn't have to be complicated. Our mission is to simplify the complexities of securing and managing your network while empowering your organization to achieve unmatched cyber resilience.

As a "Services Only" partner dedicated to delivering tailored solutions. Security is the cornerstone of our offerings and remains at the heart of every solution we deliver. Our service delivery approach prioritizes customer satisfaction by empowering you with knowledge and support throughout the lifecycle of each engagement, whether through professional services or co-managed service arrangements.

CISCO ISE

Cisco Identity Services Engine (ISE) enhances network security by providing centralized visibility and access control to network resources. It enables organizations to enforce security policies, authenticate devices, and ensure compliance, helping to protect against unauthorized access and cyber threats.

ISE COMPLEXITIES

Deploying Cisco Identity Services Engine (ISE) can be complex due to the need for careful planning of network architecture, integration with existing systems, and proper configuration of well thought out security policies. Additionally, its setup requires a deep understanding of authentication protocols, endpoint profiling, and device management, making it challenging for teams without specialized expertise.

This is where Bravo comes in. We have over 800+ ISE deployments completed with many over 1.5 million endpoints. Our experts will guide you through a successful ISE pilot.

ENGAGEMENT OUTLINE

With our experience, we have developed proven methodologies for successful project management and delivery. We will break up the pilot into three phases.

Cisco ISE Solutioning Workshop
- Bravo will review customer requirements and build a high-level design document that can be used for functional planning, ordering of equipment and licensing, and preparation for deployment. We will focus on the following:
  - Desired Use Cases
  - Architecture Design
  - Project Roadmap

Cisco ISE Pilot
- The solution will be enabled to enforce the access requirements as dictated by the discussions had in previous phases. Cisco ISE infrastructure will be functioning as per requirements and Cisco ISE will be able to demonstrate the full functionality of the solution.

Knowledge Transfer
- Bravo's approach for services delivery follows a "teach you to fish" model, where Bravo consultants will teach the Customer engineering team during the services. This enables the Customer engineers to learn throughout the services period and be in a position to support the solution earlier and minimize requirements for a formal knowledge transfer.
